

1. (1) $R(x)$: x 为实数, $G(x, y)$: x 比 y 大
 $\neg \exists x (R(x) \wedge (\forall y (R(y) \rightarrow G(x, y))))$

(2) $R(x)$: x 为实数, $G(x, y)$: x 比 y 大
 $\forall x \forall y (R(x) \wedge R(y) \wedge G(x, y) \rightarrow \exists z (R(z) \wedge G(z, y) \wedge G(x, z)))$

(3) $P(x)$: x 为质数, $E(x)$: x 为偶数
 $Eg(x, y) = x$ 等于 y
 $\exists x (P(x) \wedge E(x) \wedge \forall y (P(y) \wedge E(y) \rightarrow Eg(x, y)))$

(4) $O(x)$: x 为奇数, $E(x)$: x 为偶数
 $N(x)$: x 为自然数

$\forall x (N(x) \rightarrow \neg (O(x) \wedge E(x)))$

(5) $N(x)$: x 为自然数, $Suc(x, y)$: y 为 x 后继
 $\forall x (N(x) \rightarrow \neg Suc(x, 0))$

(6) $N(x)$: x 为自然数, $Suc(x, y)$: y 为 x 后继
 $E(x, y) = x = y$

$\forall x (N(x) \rightarrow \exists y (N(y) \wedge Suc(x, y) \wedge (\forall z (N(z) \rightarrow Suc(x, z) \wedge E(y, z))))$

(7) $C(x)$: x 为汽车, $T(x)$: x 为火车
 $F(x, y)$: x 比 y 快

$\forall x (T(x) \rightarrow \exists y (C(y) \wedge F(x, y)))$

3. (1) $P(x)$: x 为质数, $E(x)$: x 为偶数
 $Eg(x, y) = x$ 等于 y

$\exists x (P(x) \wedge E(x) \wedge \forall y (P(y) \wedge E(y) \rightarrow Eg(x, y)))$

(2) $NZ(x)$: x 不为 0, $N(x)$: x 为自然数
 $Pre(x, y)$: y 为 x 的前驱

$\forall x (N(x) \wedge NZ(x) \rightarrow \exists! y (N(y) \wedge Pre(x, y)))$

(3) $P(x)$: x 为点, $L(x)$: x 为线, $A(x, y)$: x 通过 y
 $\forall x \forall y (P(x) \wedge P(y) \rightarrow \exists! z (L(z) \wedge A(z, x) \wedge A(z, y)))$

(4) $L(x)$: x 为线, $P(x, y)$: x 为 y 上的一点

$PRL(x, y)$: x, y 平行, $T(x, y)$: x 经过 y

$\forall x (L(x) \rightarrow \forall y (P(y, x) \rightarrow \exists! z (L(z) \wedge T(z, y) \wedge PRL(z, y)))$

1. (1) $x=1$ 时, $P(1) \vee Q(1) = 1 \vee 0 = 1$

$x=2$ 时, $P(2) \vee Q(2) = 0 \vee 1 = 1$
 为真

(3) $x=1$ 时 $P(1) \wedge Q(1) = 1 \wedge 0 = 0$,
 为假。

(5) $x=1$ 时 $P(1) \rightarrow Q(1) = 1 \rightarrow 0 = 0$
 为假

(7) $x=2$ 时 $P(2)=0$, $x=1$ 时 $Q(1)=0$
 $\therefore$ 原式 $= 0 \vee 0 = 0$

3. (1) 成立: 假设 $\forall x (A(x) \rightarrow B(x))$ 为真
 假设 $\forall x A(x)$ 为真, 只需证明 $\forall x B(x)$ 为真

① $\forall x A(x), \forall x (A(x) \rightarrow B(x))$ P
 ② $A(c), A(c) \rightarrow B(c)$ ① + us
 ③ $B(c)$ ② + mp
 ④ $\forall x B(x)$ ③ + UG
 证毕。

(2) 不成立, 解释 $I = D_I = \{1, 2\}$.

$A(1)$	$A(2)$	$B(1)$	$B(2)$
1	0	0	0

$\forall x A(x) = 0, \forall x B(x) = 0. \therefore \forall x A(x) \rightarrow \forall x B(x)$ 为真
 $x=1$ 时 $A(1) \rightarrow B(1)$ 为假

(3) 成立, 左式 $\Leftrightarrow \neg \exists x A(x) \vee \forall x B(x)$
 $\Leftrightarrow \forall x \neg A(x) \vee \forall x B(x)$
 $\Leftrightarrow \forall x (A(x) \rightarrow B(x))$

(4) 不成立, 构造解释 $I, D_I = \{1, 2\}$

$A(0)$	$A(1)$	$B(0)$	$B(1)$
0	1	0	1

此解释下左式成立, 右式 $\exists x A(x) = 1, \forall x B(x) = 0$
 右式为假。

$$4.10 \text{ 左式} \Leftrightarrow \forall x (A(x) \vee \forall y B(y))$$

$$\Leftrightarrow \forall x A(x) \vee \forall y B(y)$$

$$(3) \text{ 左式} \Leftrightarrow \forall x (A(x) \wedge \forall y B(y))$$

$$\Leftrightarrow \text{右式}$$

$$(5) \text{ 左式} \Leftrightarrow \forall x (A(x) \rightarrow \forall y B(y))$$

$$\Leftrightarrow \forall x (\neg A(x) \vee \forall y B(y))$$

$$\Leftrightarrow \forall x \neg A(x) \vee \forall y B(y)$$

$$\Leftrightarrow \exists x A(x) \rightarrow \forall y B(y)$$

$$1. \text{ 证: } \forall x (M(x) \rightarrow D(x)) \wedge M(a) \Rightarrow D(a)$$

$$\textcircled{1} \forall x (M(x) \rightarrow D(x)) \quad P$$
