$$2. (1) f(99) = f(f(110)) = f(100) = f(f(111)) \\ = f(101) = 91$$

$$(2) \text{ 由(1)得 } f(100) = 91$$

假设 $\exists x \in [0, 100]$, 设 $\forall y \in (x, 100]$ 时都有 $f(y) = 91$

$$\text{则 } f(x) = f(f(x+1))$$

$$\text{当 } x+1 > 100 \text{ 时, } f(x+1) = f(x+1-10) = f(x+1)$$

$$\text{由于 } x < x+1 \leq 100, \text{ 由假设可得 } f(x+1) = 91. \therefore f(x) = 91$$

当 $x+1 \leq 100$ 时, 由于 $x < x+1 \leq 100$, 由假设可得

$$f(x) = f(f(x+1)) = f(91) = 91$$

$$\text{综上, } \forall x \in \mathbb{N}, 0 \leq x \leq 100, \text{ 有 } f(x) = 91$$

3. (1) 单射, 满射, 双射

$$\text{若 } f(x_1) = f(x_2) \Rightarrow x_1^3 + 1 = x_2^3 + 1 \Rightarrow x_1 = x_2$$

$\therefore f(x)$ 为单射.

$$\forall y \in \mathbb{R}, y = x^3 + 1 \Rightarrow x = \sqrt[3]{y-1} \in \mathbb{R}. \therefore \exists x_0 \in \mathbb{R}, f(x_0) = y$$

$\therefore f(x)$ 为满射

综上, $f(x)$ 为双射

(2) 单射

$$\text{若 } f(x_1) = f(x_2) \Rightarrow x_1 + 1 = x_2 + 1 \Rightarrow x_1 = x_2. \text{ 单射}$$

$y = 0$ 时, 不存在 $x \in \mathbb{R}$ 使得 $f(x) = x + 1 = 0$. 非满射

(3) 都不是

$$f(1) = f(4) = 1. \text{ 非单射.}$$

不存在 x_0 使得 $f(x_0) = 3$. 非满射

(4) 满射.

$$x_1 = 1, x_2 = 3, f(x_1) = f(x_2) \text{ 且 } x_1 \neq x_2. \text{ 非单射.}$$

$$f(1) = 0, f(2) = 1, \text{ 满射}$$

(5) 满射

$$f(\langle 4, 2 \rangle) = f(\langle 2, 4 \rangle) = 16, \text{ 非单射}$$

$$\forall y \in \mathbb{N}, f(\langle y, 1 \rangle) = y. \text{ 满射.}$$

$$4. \textcircled{1} A = \emptyset \text{ 时, } p(A) = p(\emptyset) = \{\emptyset\}$$

$f: \emptyset \rightarrow \{\emptyset\}$ 为 A 到 $p(A)$ 的单射

$\textcircled{2} A \neq \emptyset$ 时, $f(x) = \{x\}$ 为 A 到 $p(A)$ 的单射.

7. 假设 $y_1, y_2 \in Y$ 且 $g(y_1) = g(y_2)$, 下面证明 $y_1 = y_2$

由 f 满射, 有 $\forall y \in Y, f^{-1}(\{y\}) \neq \emptyset$

$$\forall x \in f^{-1}(\{y_1\}), \text{ 由逆像定义, } f(x) = y_1$$

$$\text{又 } f^{-1}(\{y_1\}) = g(y_1) = g(y_2) = f^{-1}(\{y_2\}). \therefore f(x) = y_2$$

$$\therefore y_1 = y_2$$

即 $g(y_1) = g(y_2) \Rightarrow y_1 = y_2$, 故 g 为单射

$$5. (\Leftarrow) \forall x \in A, \exists x_0 \in A, h(x_0) = x.$$

$$\forall f, g \in A^A, \Rightarrow f \circ h = g \circ h, \therefore f(h(x_0)) = g(h(x_0))$$

$$\therefore \forall x \in A, f(x) = g(x). \text{ 故 } f = g$$

($\Rightarrow$) 假设 h 非满射

$$\therefore \exists y_0 \in A, \forall x \in A, y_0 \neq h(x).$$

$$\text{令 } f(x) = x, g(x) = \begin{cases} x, & x \neq y_0 \\ y_1, & x = y_0 \end{cases} \quad (y_1 \neq y_0)$$

此时 $f \circ h = g \circ h$ 但 $f \neq g$.

$$8. (1) f \circ h_1: A \rightarrow Y, g \circ h_1: A \rightarrow Y$$

$$\forall x \in A, f \circ h_1 = f(h_1(x)) = f(x)$$

$$= g(x) = g(h_1(x)). \therefore f \circ h_1 = g \circ h_1$$

$$(2) \forall x_1 \in B, f \circ h_2 = g \circ h_2 \Rightarrow f(h_2(x_1)) = g(h_2(x_1))$$

$$\text{又 } h_2(x_1) = x_1. \therefore f(x_1) = g(x_1). \text{ 又 } B \subseteq X$$

$$\therefore x_1 \in X \wedge f(x_1) = g(x_1).$$

故 $x_1 \in A$. 则 $B \subseteq A$

$$2. (1) f_1: A \rightarrow A$$

$$1 \longrightarrow 1$$

$$2 \longrightarrow 2$$

$$3 \longrightarrow 3$$

$$4 \longrightarrow 4$$

$$(2) f_2: A \rightarrow A$$

$$1 \longrightarrow 1$$

$$2 \longrightarrow 2$$

$$3 \longrightarrow 3$$

$$4 \longrightarrow 4$$

$$3. (1) k_1: \mathbb{N} \rightarrow \mathbb{N}, k_1(x) = \left\lfloor \frac{x}{3} \right\rfloor$$

$$(2) k_2: \mathbb{N} \rightarrow \mathbb{N}, k_2(x) = \left\lfloor \frac{x+1}{3} \right\rfloor$$

4. 不是,

$g \circ f$ 左可逆, g 非左可逆
